

# MODULAR CONSTRUCTION IN BRAZIL: CHALLENGES AND OPPORTUNITIES FOR IMPLEMENTING MASS CUSTOMIZATION

**Prof. Carlos T. Formoso**

Building Innovation Research Unit (NORIE)

Federal University of Rio Grande do Sul (UFRGS)

Porto Alegre, Brazil

# Summary

- **Modular Construction:** definition and limitations
- **Mass customization :** scope of decision categories
- **Challenges and opportunities of Modular Construction in Brazil**
- **Modular construction and sustainability**

# What is Modular Construction?

- Construction process in which a **large share of activities are executed off-site**, in a **controlled environment**, with a **high degree of mechanization**
- **Panels or volumetric modules** are used, and these have a **high degree of completeness**
- **Integration of components** is undertaken in an **industrial environment**
- The **modularity concept** is used

# Limitations of Modular Construction

- **The degree of mechanization and automation varies substantially:** many companies do not deliver a combination of highly repetitive standardized modules, produced by semi-automated production lines
- **Degree of completeness of modules produced in manufacturing plants also vary substantially**
- **Many projects that use modular construction also involve non modular activities,** including other prefabricated Building systems and traditional construction site activities
- **Concept of modularity has not been fully explored,** being often poorly adapted to construction

# Modular Construction in housing - Brazil

- Recent examples from Brazil

# Modular Construction in other types of projects - Brazil

Schools

# What is *Mass Customisation*?

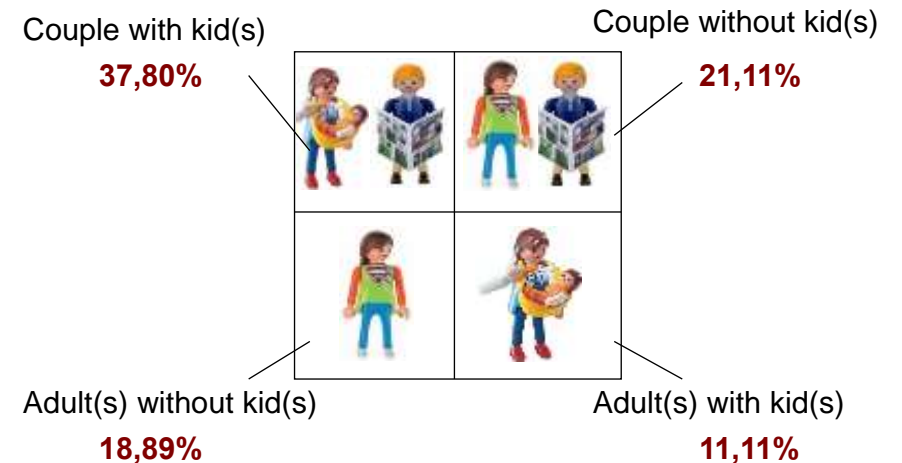

- **Competitive strategy that aims to offer products that fulfil customers' specific requirements through flexible processes and structure, within costs and delivery time similar to mass production (Pine, 1993)**
  - Limited customization based on a deep knowledge about customer requirements
  - Based on the assumption that there is a premium price

# Why Mass Customization is important for housing?

- Inadequacy of traditional project delivery approaches results in **poor value generation**

- **Diversity of customer profiles** in low-cost housing
- **Changes in life-style:** homework, leisure, respect to minorities, etc.

Example from a housing program in Brazil

# Simplified views of Mass Customization

# Quantitative techniques for assessing customization options

 Ceramic tiles flooring in the kitchen, laundry and bathroom, White walls. <b>FINISHINGS</b>	 Standard sanitary ware, laundry tub and standard water and electric installations. <b>EQUIPMENT &amp; INSTALLATIONS</b>	 Housing unit without doors and window bars. <b>SAFETY DEVICES</b>	 Standard size rooms without any possibility of change. <b>DIMENSIONS &amp; LAYOUT</b>	 <b>\$ 0.00</b> <b>PRICE</b>
 Chose floor finishings, different colors in the walls and lining. <b>FINISHINGS</b>	 Chose sanitary ware, install a cable, air conditioned outlet, flexibility in positioning electrical and water spots; remove laundry tub. <b>EQUIPMENT &amp; INSTALLATIONS</b>	 Chose to install doors and window bars. <b>SAFETY DEVICES</b>	 Chose to increase laundry and kitchen size, adding partition wall. <b>DIMENSIONS &amp; LAYOUT</b>	 <b>\$ 57,197.00</b> <b>PRICE</b>

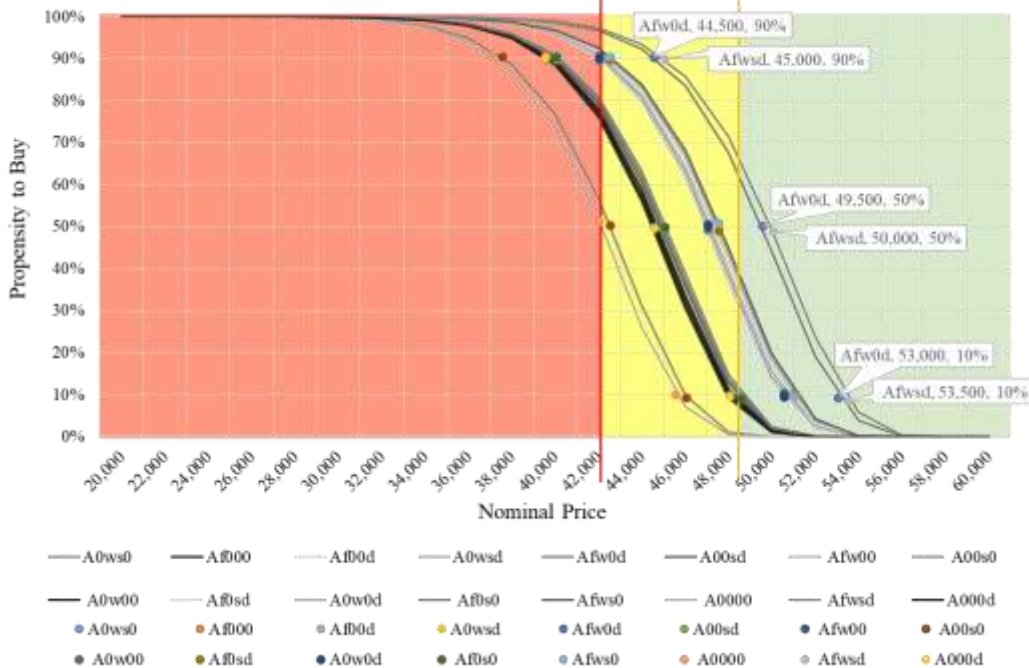

**Assessment of willingness to pay**

## Choice menu

<b>Orientação solar predominante</b> <input type="checkbox"/> Sul - menor incidência solar (desconto) R\$ -10.763,00 <input type="checkbox"/> Oeste - sol da tarde (desconto) R\$ -10.763,00 <input type="checkbox"/> Leste - sol da manhã + R\$ 10.763,00 <input type="checkbox"/> Norte - maior incidência solar + R\$ 17.938,00 <input type="checkbox"/> Não tenho preferência de orientação solar	<b>Posição no edifício</b> <input type="checkbox"/> Fundos (desconto) R\$ -14.350,00 <input type="checkbox"/> Lateral R\$ 0,00 <input type="checkbox"/> Frente + R\$ 14.350,00 <input type="checkbox"/> Não tenho preferência de posição no edifício	<b>Ventilação dos ambientes</b> <input type="checkbox"/> Consideraria comprar com banheiro ventilado mecanicamente por exaustor, sem janela <input type="checkbox"/> Só compraria com ventilação natural de todos os ambientes por janelas <input type="checkbox"/> Não tenho preferência de ventilação
<b>Tipo de Edifício</b> <input type="checkbox"/> Tipo A R\$ 0,00 <input type="checkbox"/> Tipo B + R\$ 21.525,00 <input type="checkbox"/> Tipo C + R\$ 35.875,00 <input type="checkbox"/> Não tenho preferência de tipo de edifício		

**Total do imóvel: 358.750,00**

Hentschke (2021)

# Product modularity

**Definition:** result of the division of a product in subsystems which have different functions, and are connected by standard interfaces

**Modular architecture products:** there is a direct relationship between components and functions. It is the opposite of integral architecture products

**modular**

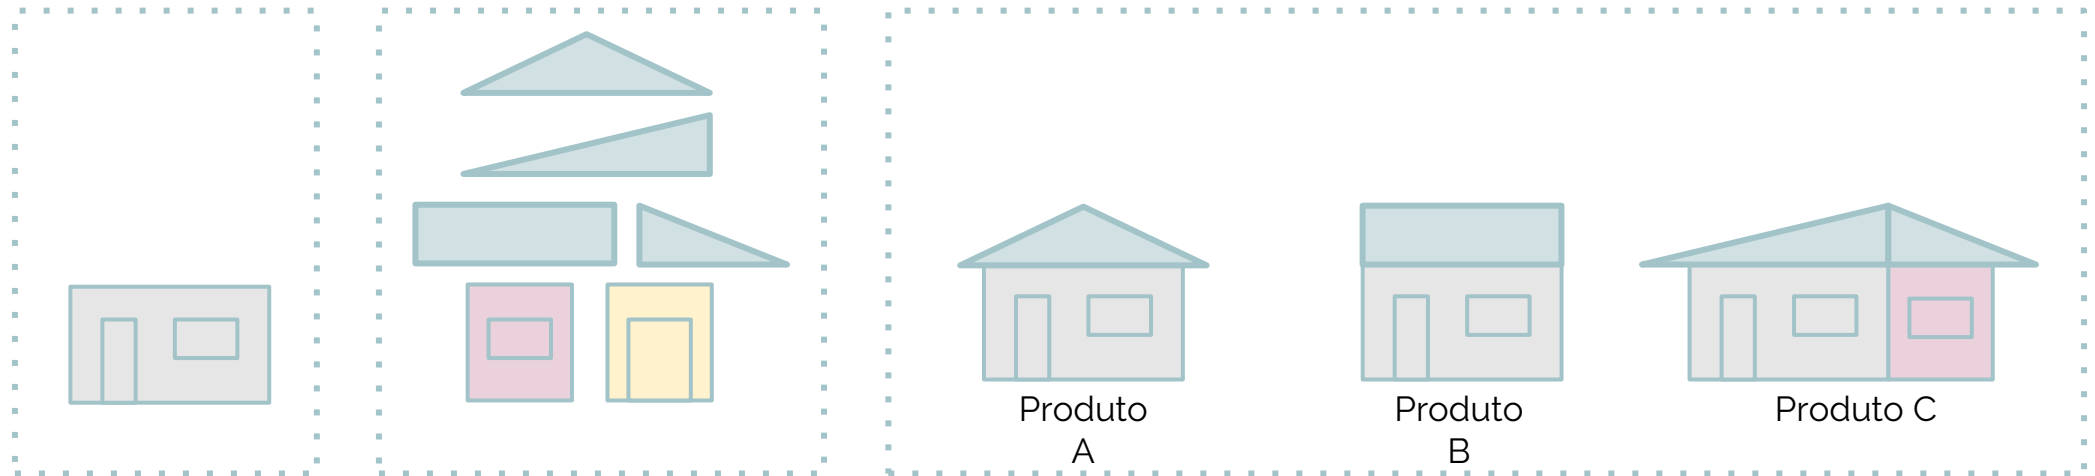

**integral**

# Platform and platform product family

- **Platform:** set of modules that are used for several different products (or for a family of products), with the aim of increasing repetition
  - Platform product: most of the products of the family use the same modules

**Plataform**

**Modules**

**Product family**

# Home design catalogues

- Often adopted by companies that do not know much about customer requirements
- Contributes to increase the number of options
- Creates burden of choice

# Application of the concept of product modularity

# Application of the concept of product modularity

# Different hierarchical levels of product modularity

- **KITS:** set of elements or components that are supplied in a specific workstation
- **COMPONENTS:** pre-fabricated elements that are used for the assembly of volumetric modules (e.g. columns, beams, panels, slabs)
- **CHASSIS:** tri-dimensional (3D) structural component that allows other components to be precisely positioned
- **3D MODULE WITHOUT FINISHINGS:** tri-dimensional module that contains only the structure and panels (walls, ceiling, floor)
- **3D MODULE WITH FINISHINGS:** tri-dimensional module that is produced in the manufacturing plant (includes also plumbing, electrical fittings, some finishings, etc.)
- **SITE ASSEMBLY MODULE :** combination of models PA that are connected and finished at the construction site

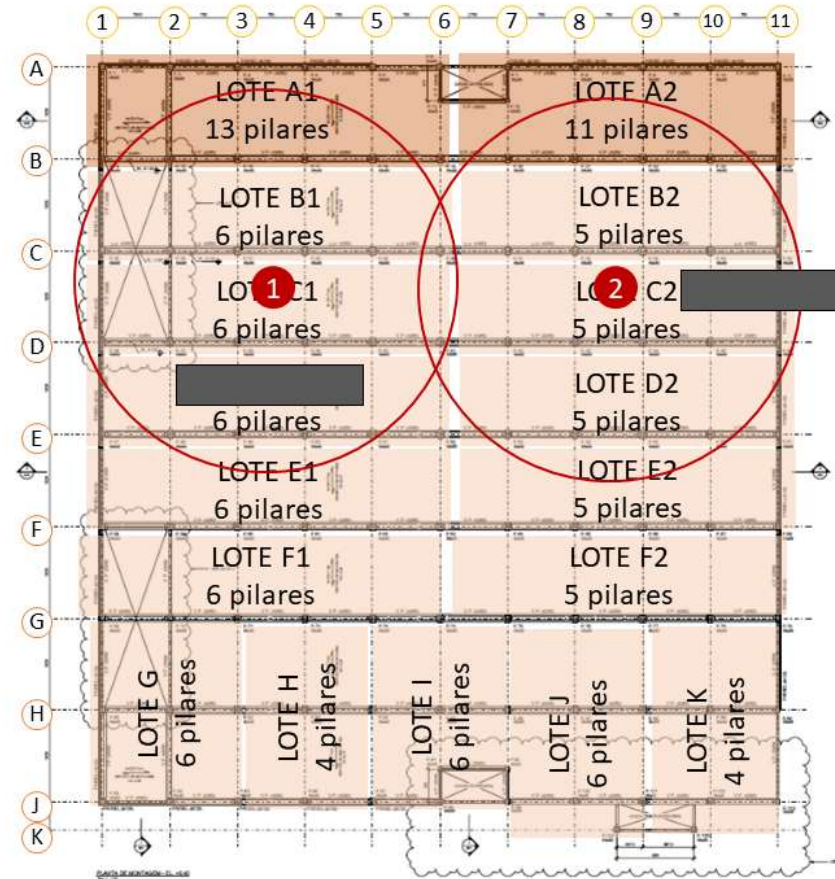

# Process modularity: reduction of batch size

- A process is divided in batches that have some degree of repetition, although product modules are not identical
- Each batch has a similar set of tasks and work density
- Applicable also for production lines with a high level of automation

# Process modularity: case of Porto Alegre Airport

Location based plan: takt time, similar cycle times

# Opportunities for gradual implementation of off-site modular construction

*Pre-fabricated façades*

Modular toilet

# Opportunities for gradual implementation of off-site modular construction

On-site pipe shop

*Ready to install electrical wiring*

# Lean concepts in production management: small batches, WIP control, visual management, etc.

# Metrics for controlling status of the system

## Matrix for status control

# Final comments

- **Major changes are happening in the construction industry:**
  - New generation of industrialized construction technologies
  - Widespread use of digital technologies
  - New business models
- **Mistakes from the past must not be repeated:** focusing on technological solutions, without improving managerial models
- **Understanding the diversity in client demands plays an important role in some market segments:** product customization, short lead-times, product-service systems, etc.
- ***Lean* concepts and methods and digital technologies have played key roles in modular construction**
